

ORABOND BLANC

WHITE UNIVERSAL PUTTY GLUE

CONTAINS NO SILICONE

DEFINITION

Flexible, single-component, putty glue that is formulated for bonding and sealing on all materials. This new generation hybrid polymer glue is odourless and possesses high tensile and shear strength and demonstrates stronger resistance to wrenching than silicones and polyurethanes.

ADVANTAGES

Provides exceptional bond on all materials, such as wood, composite, cork, plasters, concrete, glass, metals, PVC, tiles, polyester, polystyrene, stainless steel, aluminium, among others, even when completely immersed in water.

Resists oils, greases, aliphatic solvents, alcohols, diluted acids and bases, and humidity.

Possesses considerable flexibility; resists vibrations.

Neutral pH.

For indoor or outdoor use; resists UV rays and the elements.

Can be painted over, even with water-based paints.

Can be used with powder coatings cured at 210°C for 10 minutes.

Can be used on items that may come into contact with foodstuffs. Contains no solvents.

Economical: Apply a thin line or layer (one cartridge can glue up to 11 m of 5 x 5 mm joints).

APPLICATION FIELDS

Use in building construction and maintenance, exterior and interior, e.g., ceiling suspension, bonding sound dampening panels, tiles, skirting boards, fibreglass, etc.

Roofing, bonding tiles and zinc.

Decorations, sign panels, and more.

Bonding metal to metal, aluminium to aluminium, ABS, PMMA, and more.

Automobile: sealing, repairing car bodies, plastics, etc.

TECHNICAL CHARACTERISTICS

Aspect	Thixotropic putty
Colour	White
Operating temperature	-40°C min to +150°C max, under load of 140N/cm ²
Hardness	45 to 60 Shore A
Initial setting	10 minutes
Elongation at break	500%

ORAPI® cannot be expected to know all applications in which its products are used or their conditions of use. ORAPI® shall not be held responsible: for the suitability of its products for a given use or specific purpose, for the methods of application over which it has no control. The information contained in this technical data sheet can on no account be a substitute for the preliminary tests which are essential and which must be carried out in order to check the suitability of the product to each intended application. The user of the product described in this technical data sheet is solely responsible for all measures required to protect people and property from hazards that may arise from the implementation and/or use of this product. Therefore, ORAPI® renounces any implicit or explicit guarantees, including guarantees relating to marketability or suitability for a certain purpose, resulting from the sale or use of its products. In particular, ORAPI® renounces any claims for incidental or consequential damages whatsoever, including financial operating losses."

TECHNICAL CHARACTERISTICS - continued

Tension at 100% elongation (DIN 52455.5.2) . more than 140 N/cm²
Elasticity maximum load 140 N/cm²

Circular ribbon / use as putty:

Rate of polymerisation 2 mm / 24 hours. This rate varies with humidity levels
..... present in the ambient air.
Bond / Firm bond Immediate / 24 hours

Structural bonding of flat surfaces:

Rate of polymerisation 1 to 2 mm from the edge of bonded surfaces / 24 hours This
..... rate varies with the humidity levels in the ambient air.
Bond / Firm bond Immediate / from 24 hours to 1 week depending on the
..... gluing surface.

Compatible with acetic acid, 10% acetone, aniline, benzene,
..... 20% hydrochloric acid, 10% potassium, ethanol,
..... gasoline, xylene, 70% sulphuric acid,
..... 50% sodium hydroxide. Other products: contact us.

INSTRUCTIONS FOR USE

Ready to use.

Use with a trigger or pump, at temperatures between +5 and 30°C.

To use as sealing putty, apply a line of glue, approximately 1 to 10mm thick, on clean and dry surfaces.

To glue, apply the adhesive in a thin layer on a clean and dry surface.

Let sit for a minimum of 90 seconds to a maximum of 120 seconds before assembling so that humidity in the surrounding air can trigger vulcanisation.

Place the assembled parts in a vice until a sufficient bond is created for handling assemblies.

Double-sided tape may also be used to temporarily brace assembled parts until glue has set.

Cleaning product to be used before polymerisation: NETTOYANT 3141.

PACKAGING

290 ml cartridge

Ref. 1125 C6

x 12
